Introduction

- Jeff Silverman is Sr. Manager with Grant Thornton, LLP as a leader in its Business Analytics practice. He is certified in over 20 different technologies and specializes in assessment and planning of analytic solutions. Jeff has acted in CIO/Sr IT roles for multiple clients in transition.
- Currently a Military Intelligence Lieutenant Colonel in the US Army Reserves, he previously led US Strategic Command's Big Data Initiative and has commanded a Military Intelligence Battalion of 500 intelligence operatives.
- Jeff was recently published on CFO Magazine, Insight Magazine, and multiple technology and leadership blogs

About Grant Thornton

Office locations

59 offices spread across 30 states and Washington D.C.

People

More than **8,500** professionals in the U.S.

Reach

Serve 36% of companies on the 2018 Fortune 500 list and 25% of companies on the Russell 2000 list

Partners

594 partners serving more than 8,000 clients in the nation

Our services

• Assurance • Tax • Advisory

Revenue

GT U.S. net revenue equals **\$1.9 billion**

What we do

A full suite of services provided by professionals with the right experience

Financial statement audits

SEC registrants (public companies)
Private companies
Employee business plans
Not-for-profit organizations
Government

Public finance services

Cash flow and yield verification
Arbitrage rebate compliance

Accounting consulting services

U.S. GAAP
Implementation of new standards
IFRS reporting and conversions
Fresh start
Other comprehensive bases of accounting

Examination and reviews

Conflict minerals reporting
Sustainability reporting
Vendor compliance
Service organization controls
HIPAA/HITECH security and privacy controls
Cybersecurity controls
Other subject matters

Partnerships

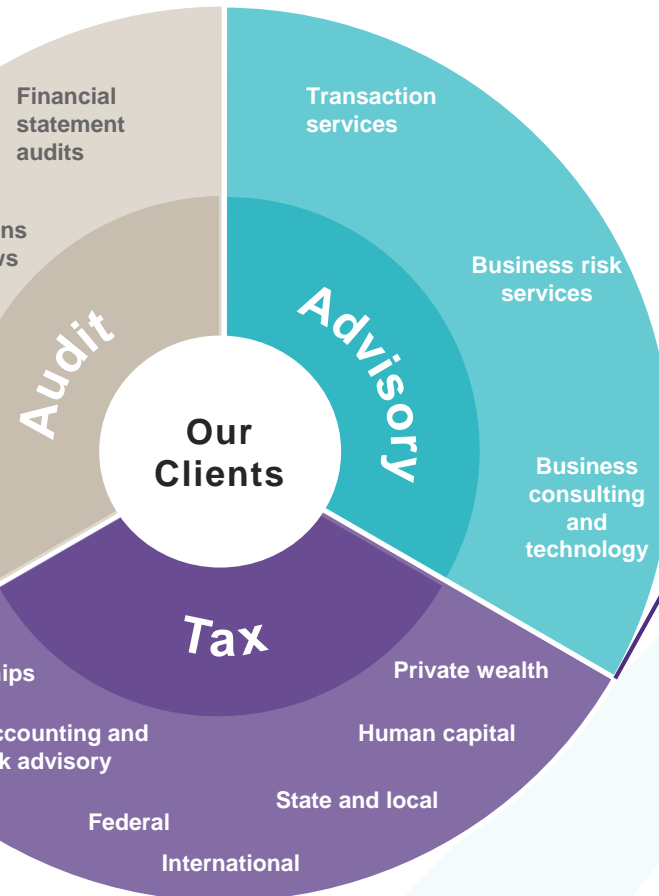

Federal, multistate and foreign tax returns
Loan staff and outsourcing services

Tax accounting and risk advisory

Accounting for income taxes
Tax function optimization
Global compliance and reporting

Federal tax

Corporate tax
M&A
Accounting methods
Cost segregation
Interest and penalty services
Research tax credits
Section 199 – DPAD
Fixed asset services

Business consulting and technology

Financial management
Strategy and performance improvement
Technology strategy and management
Business Applications

Business risk services

Risk advisory services
Forensic advisory services
Data analytics

Transaction advisory

Diligence
Corporate finance
Operations
Tax

State and Local Tax

Controversy
Credits and incentives
Real and personal property tax
Reorganizations, M&A
Sales, use and other transactional tax
Unclaimed property (escheat)

International tax

BEPS analysis and perspective
Global growth strategy
Transfer pricing
Cross-border structuring
Legal entity optimization
Global tax compliance

Private wealth services

Corporate executives
Business owners
Family office services

Human capital services

Actuarial
Benefits
Compensation
Employment tax
Global mobility services
Human resource services

Introduction

The background of the slide features two thick, parallel diagonal stripes. The top stripe is a dark blue color, and the bottom stripe is a burnt orange or terracotta color. They run from the bottom-left towards the top-right of the frame.

Agenda

- Start small
- Proper choice of visualization
- Uniform scaling
- Color coding dimensionality
- In sequence reporting
- Proximity of associated data
- Restraint

Objectives

- Understand core analytic principles
- Determine the best visualization for each scenario

Key Takeaways

- Tool-agnostic analytic principles
- Separate the signal from the noise with correct visualizations

Strategy #1 – Start small

Start small

Start small

Start small

Find Waldo?

Strategy #2 – Proper choice of visualization

Proper choice of visualization

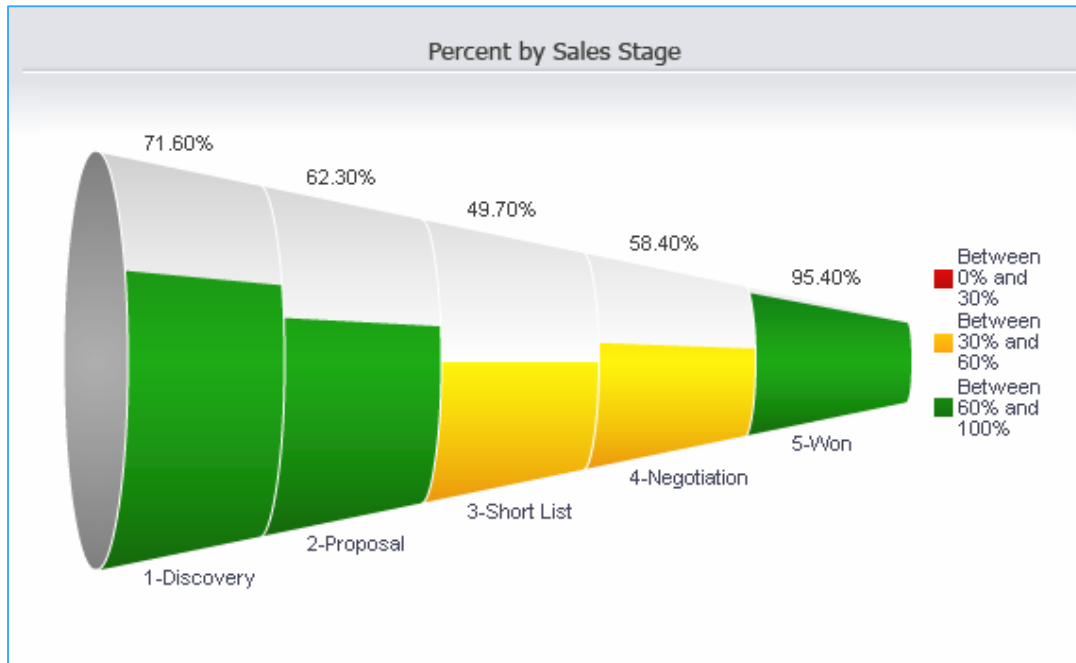

What's wrong with this picture?

Lost Revenue, Closed Revenue

Proper choice of visualization

Sales funnel

Description

A sales funnel is the visual representation of the buying process that companies lead customers through when purchasing products, with each section showing the continuous degradation of values through the funnel. A sales funnel is divided into several steps, which differ depending on the particular sales model.

Use

Enables users to view a summary of the open opportunities in the pipeline. Each section of the funnel graphic can represent a separate sales opportunity stage or multiple stages. A funnel section can be explored to view all current open opportunities that can be forecasted in that stage or group of stages in the sales cycle.

Proper choice of visualization

Waterfall

Description

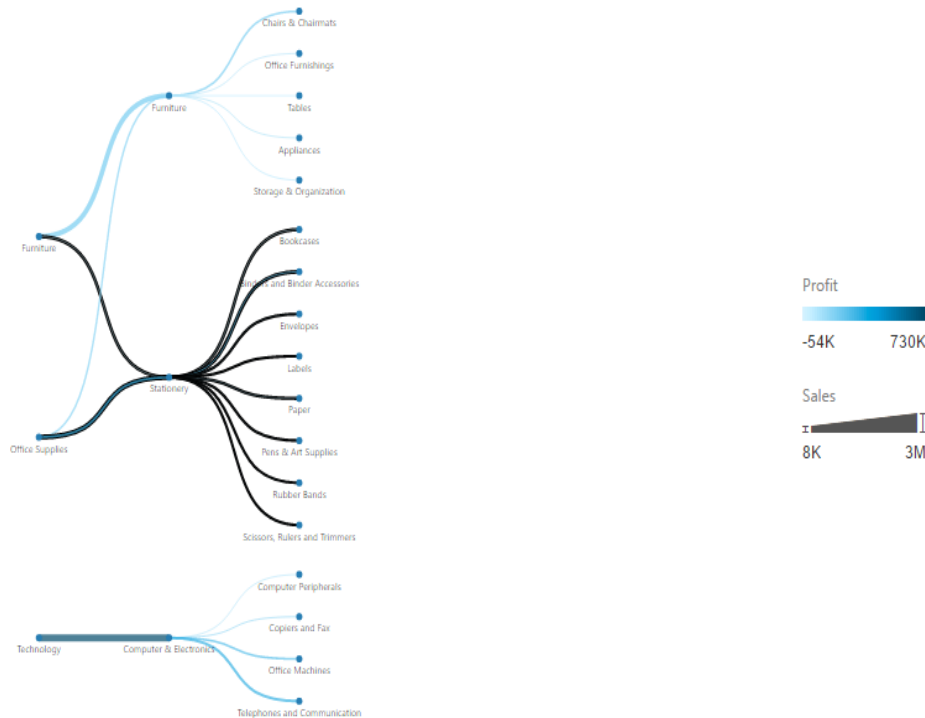

Waterfall graphics show how an initial value is increased and decreased by a series of intermediate values. They are favorites of financial and accounting departments to show contributions and profitability.

Use

Provides a quick view of how certain facts (i.e. Profit) or dimensions (i.e. Order Date(Year)) contribute to an initial value. For example, showing incremental contributions of profit by department.

Proper choice of visualization

Hierarchy Trees (Sansa)

Description

A strategy tree shows an objective and its supporting objectives and KPIs hierarchically. Identifies which objectives are built upon each other.

Use

Provide Business analysts with a simple way to visualize strategies for entire scorecards, as well as individual objectives.

Proper choice of visualization

Strategy maps

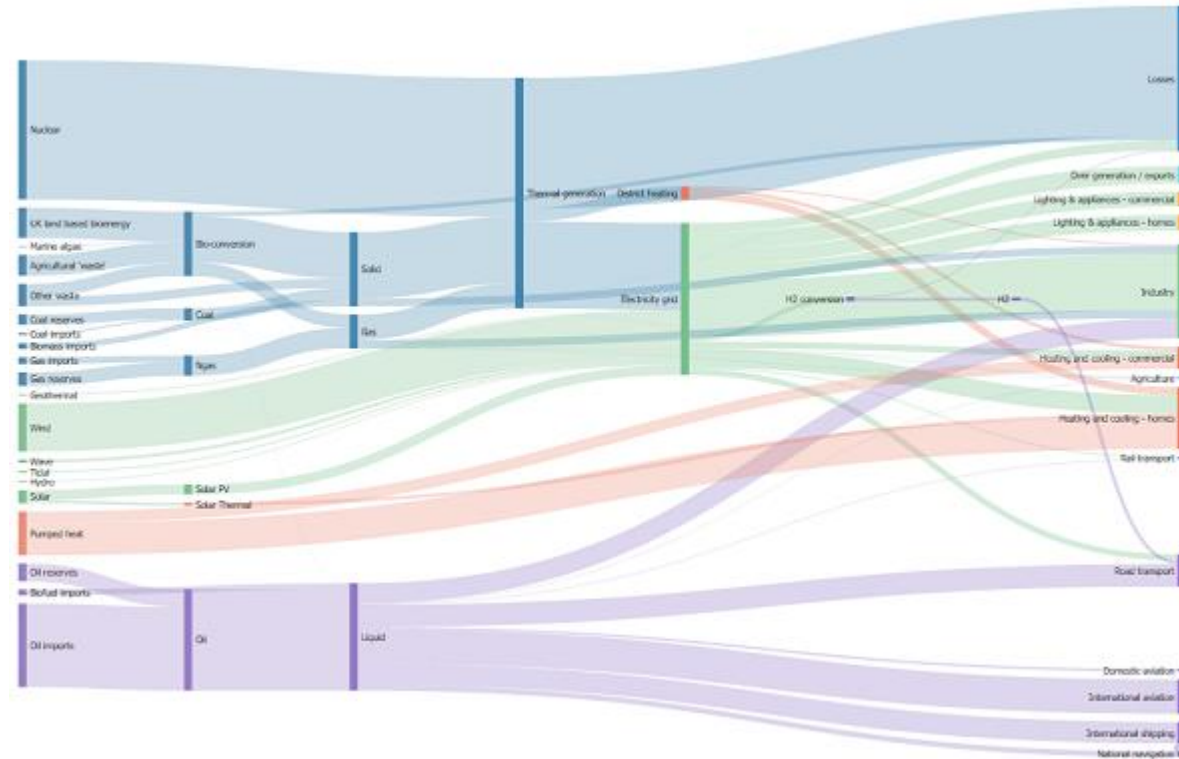

Description

A strategy map shows how the objectives that have been defined for a scorecard and the KPIs that measure their progress are aligned by perspectives. It also indicates cause and effect relationships between objectives and other objectives or KPIs with connecting lines.

Use

Allows analysts to ensure associated objectives and KPIs relate to each other and identify cause and effect relationships. Provides a holistic view strategies, particularly when used in conjunction with strategy trees.

Sankey Diagrams

Description

A Sankey diagram shows how relationships of one set of dimensions to another.

Use

Allows analysts to examine the relationship of given dimensions to each other. For example how products distribute to customers.

Proper choice of visualization

Geospatial/geoprompting

Description

Geospatial reporting provides comparisons with a map backdrop or comparison of distances between.

Geoprompting provides heat map alerts for users and prompts them to select areas and drill to greater detail.

Use

Provides a perfect visualization of regional sales, revenue, profit, etc. Particularly helpful for trend investigation.

Quick Vignette

Proper choice of visualization

80-20 relationships

Description

This report measures how the upper group of a specific population set contributes in descending order of value. Filters enable users to set a percentage limit of value for the top group, and the report renders the corresponding percentage of the population that makes up that value.

Use

Provides analysts the ability to identify the most impactful contributors to a metric out of a population, allowing the business to focus on more important relationships.

Proper choice of visualization

Bubble chart

Description

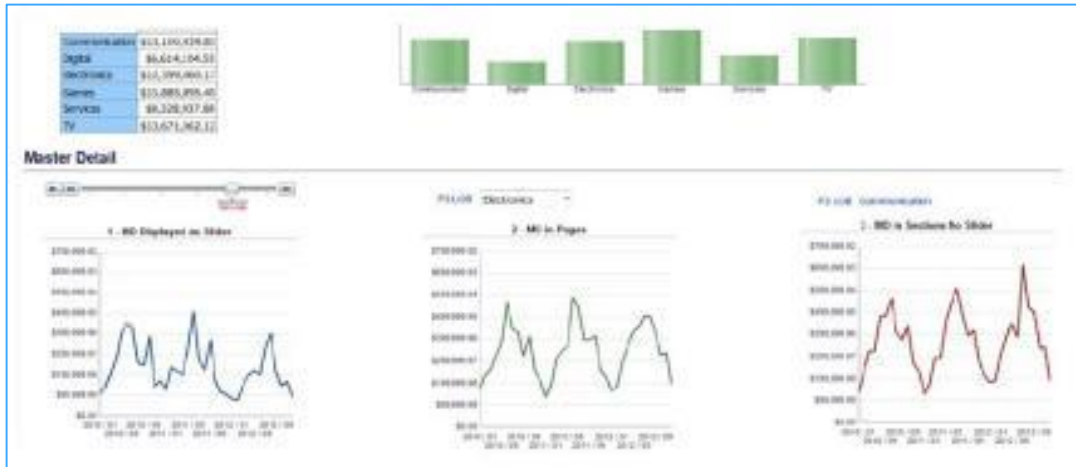

Bubble charts are used in scatter plot scenarios where more than two variables can be used. Data points are depicted by the location and size of round data markers (bubbles). Bubble charts are useful to segment populations of data, apply quadrant labels and prompt users for further investigation.

Use

Bubble graphs are used to show correlations among three types of values, especially when a number of data items exist and a view of their general relationship is desired.

Proper choice of visualization

Master/detail views

Description

The master/detail linking allows users the ability to establish a relationship between two or more views; one view is called the master and will drive changes in one or more views called detail views.

Use

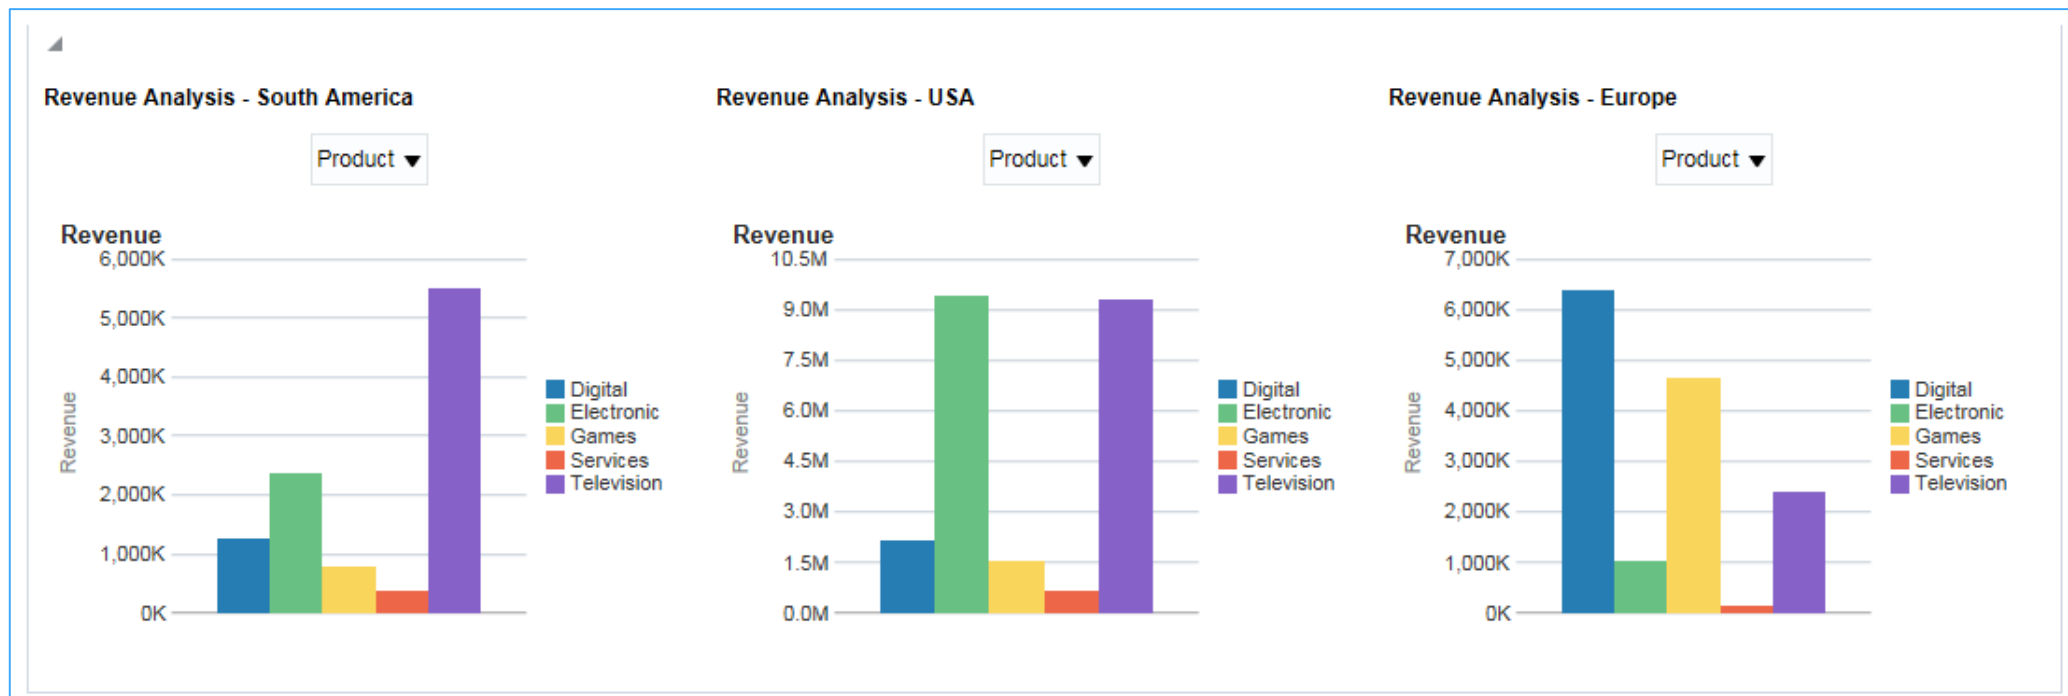

Provides users with the ability to view master/detail relationships and how filters may effect them.

Strategy #3 – Uniform Scaling

Uniform scaling

Strategy #5 – In sequence reporting

In sequence reporting

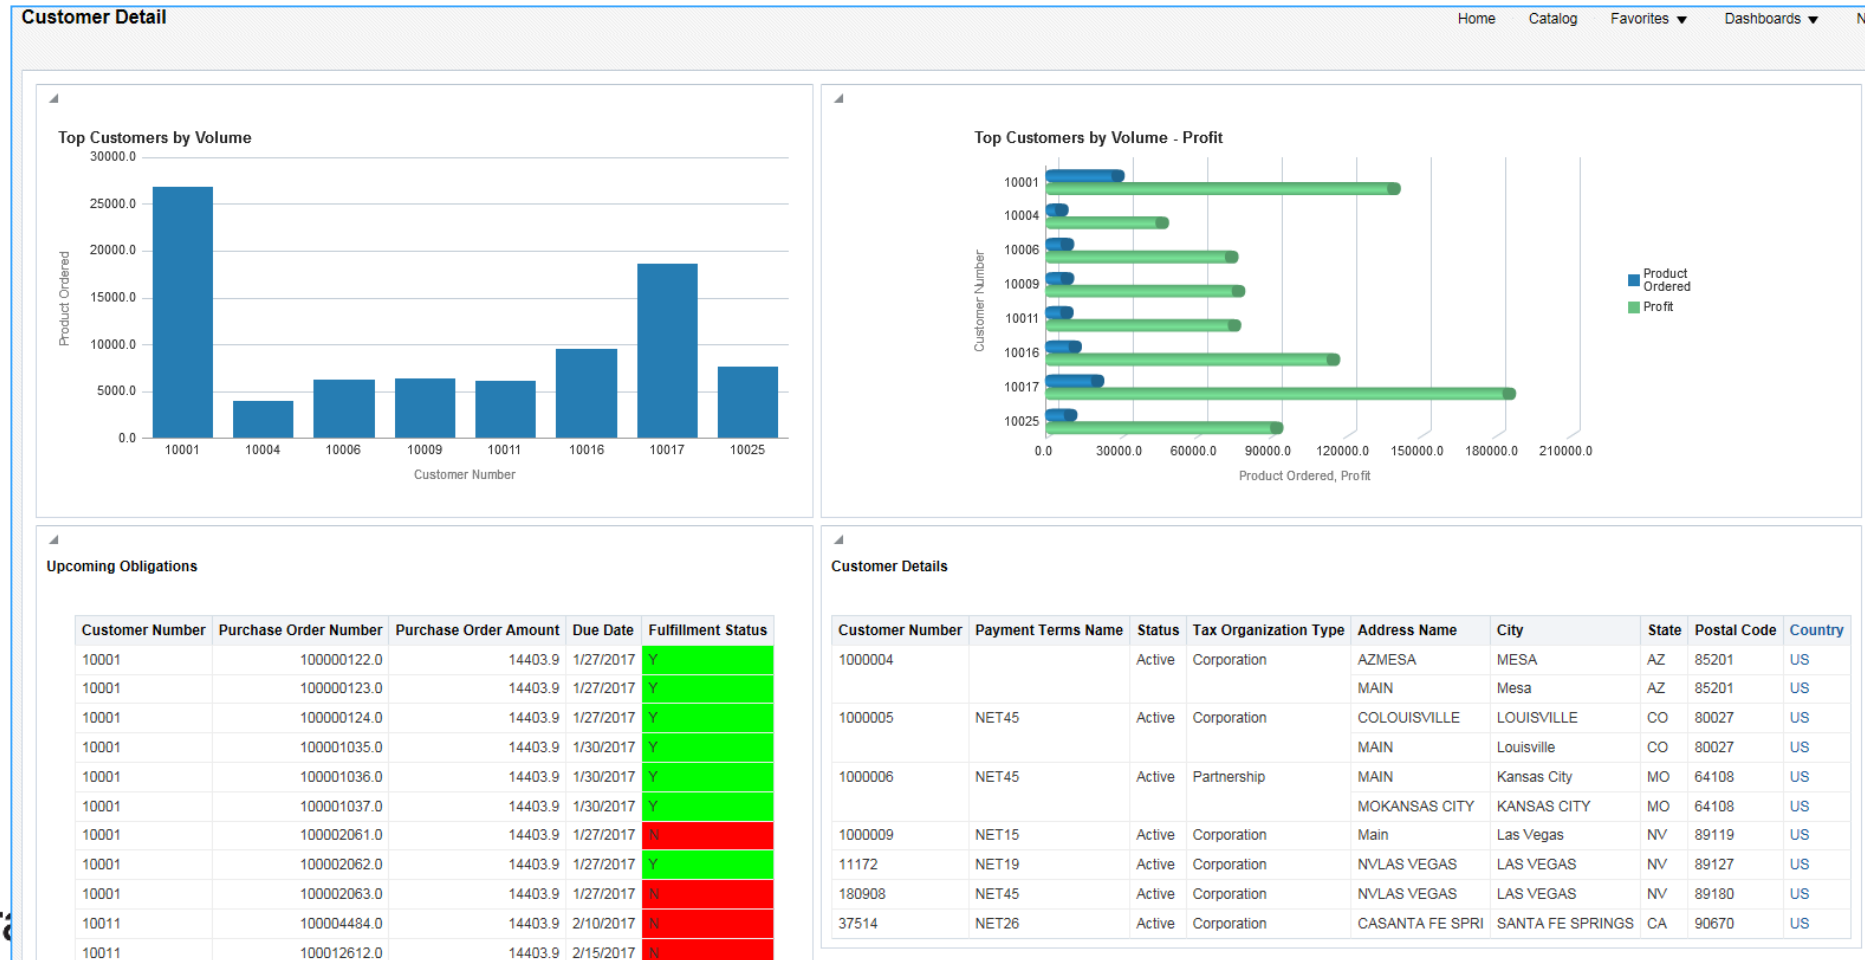

In sequence reporting

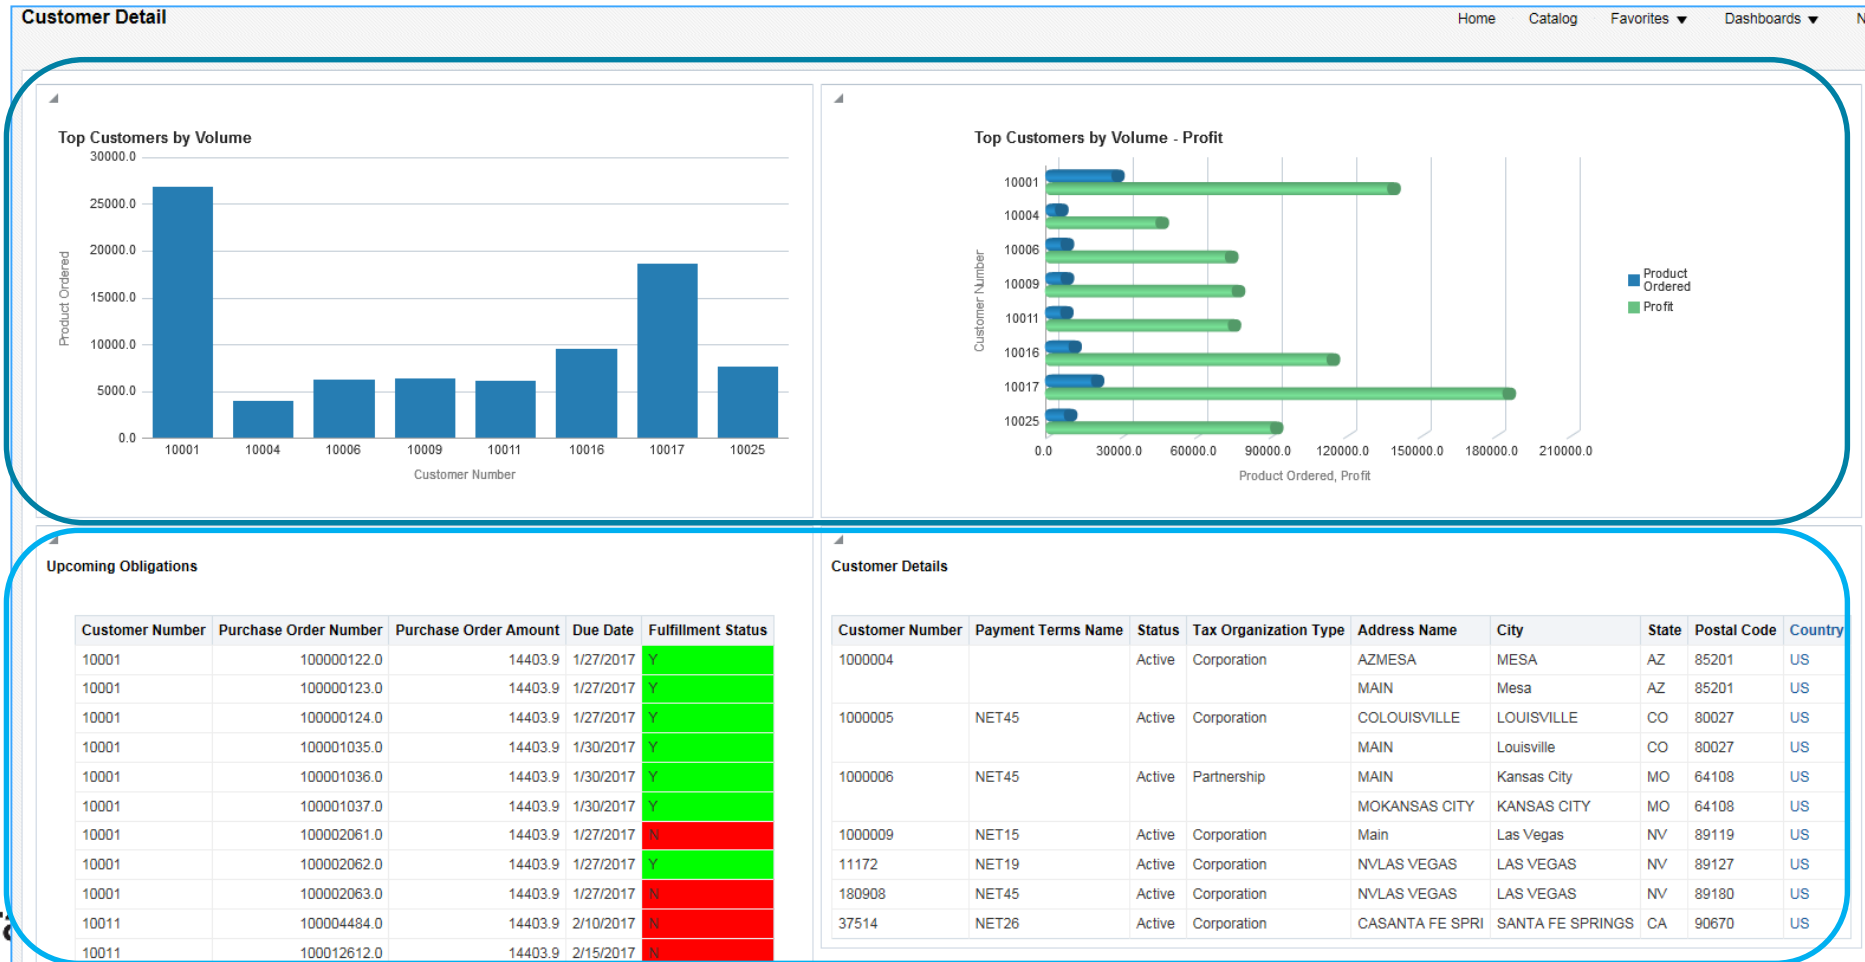

Strategy #6 – Proximity of associated data

Proximity of associated data

Proximity of associated data

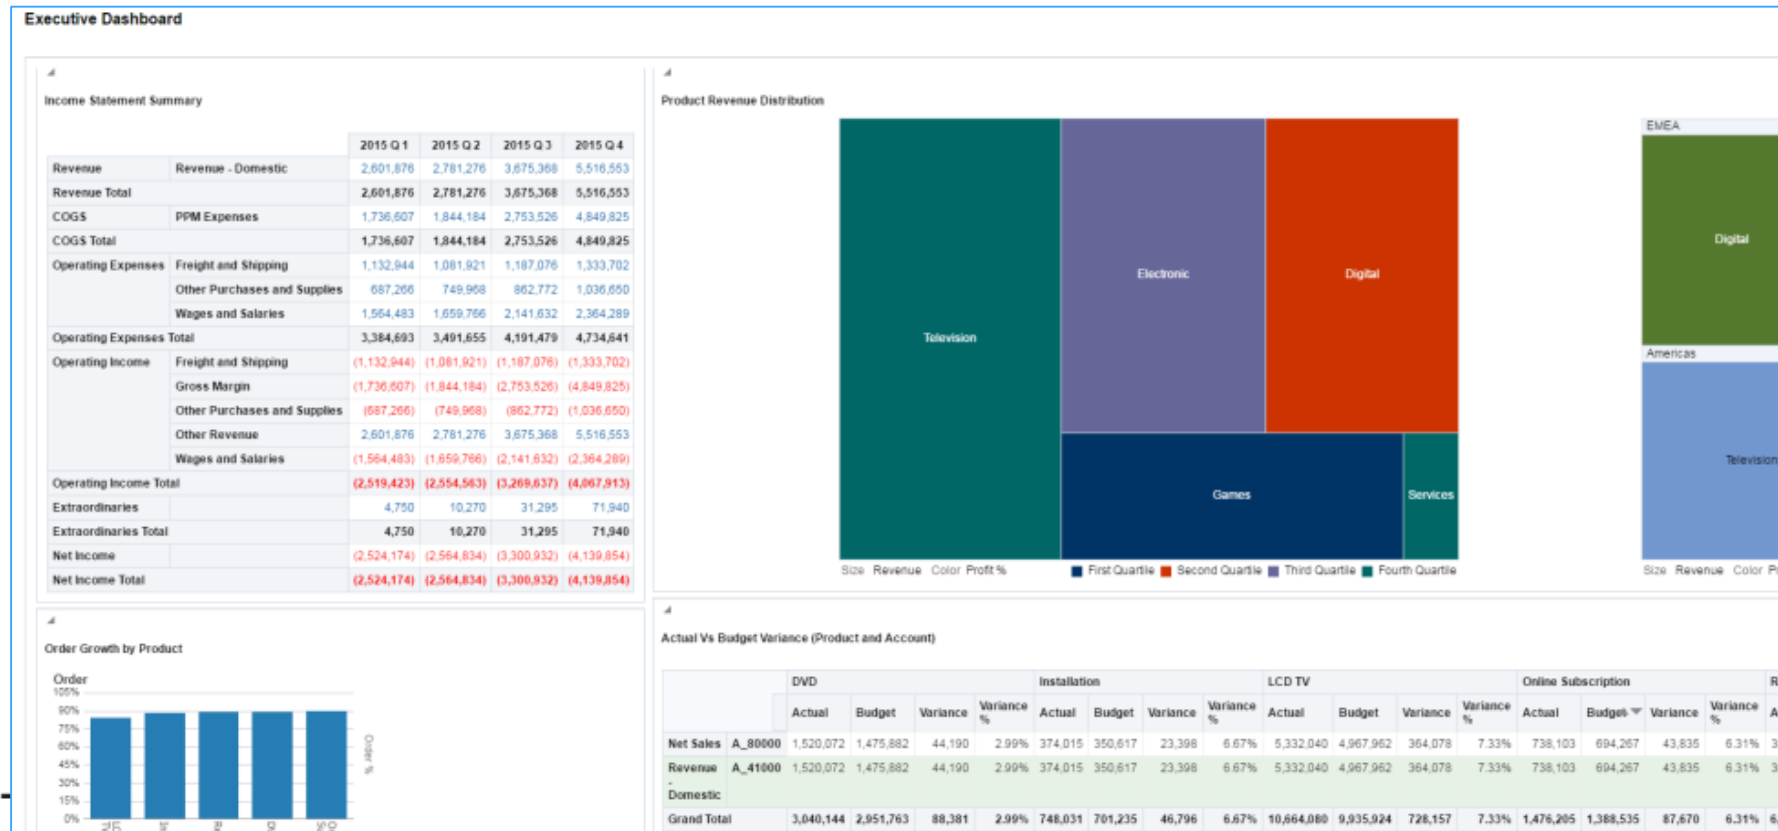

Strategy #7 – Restraint

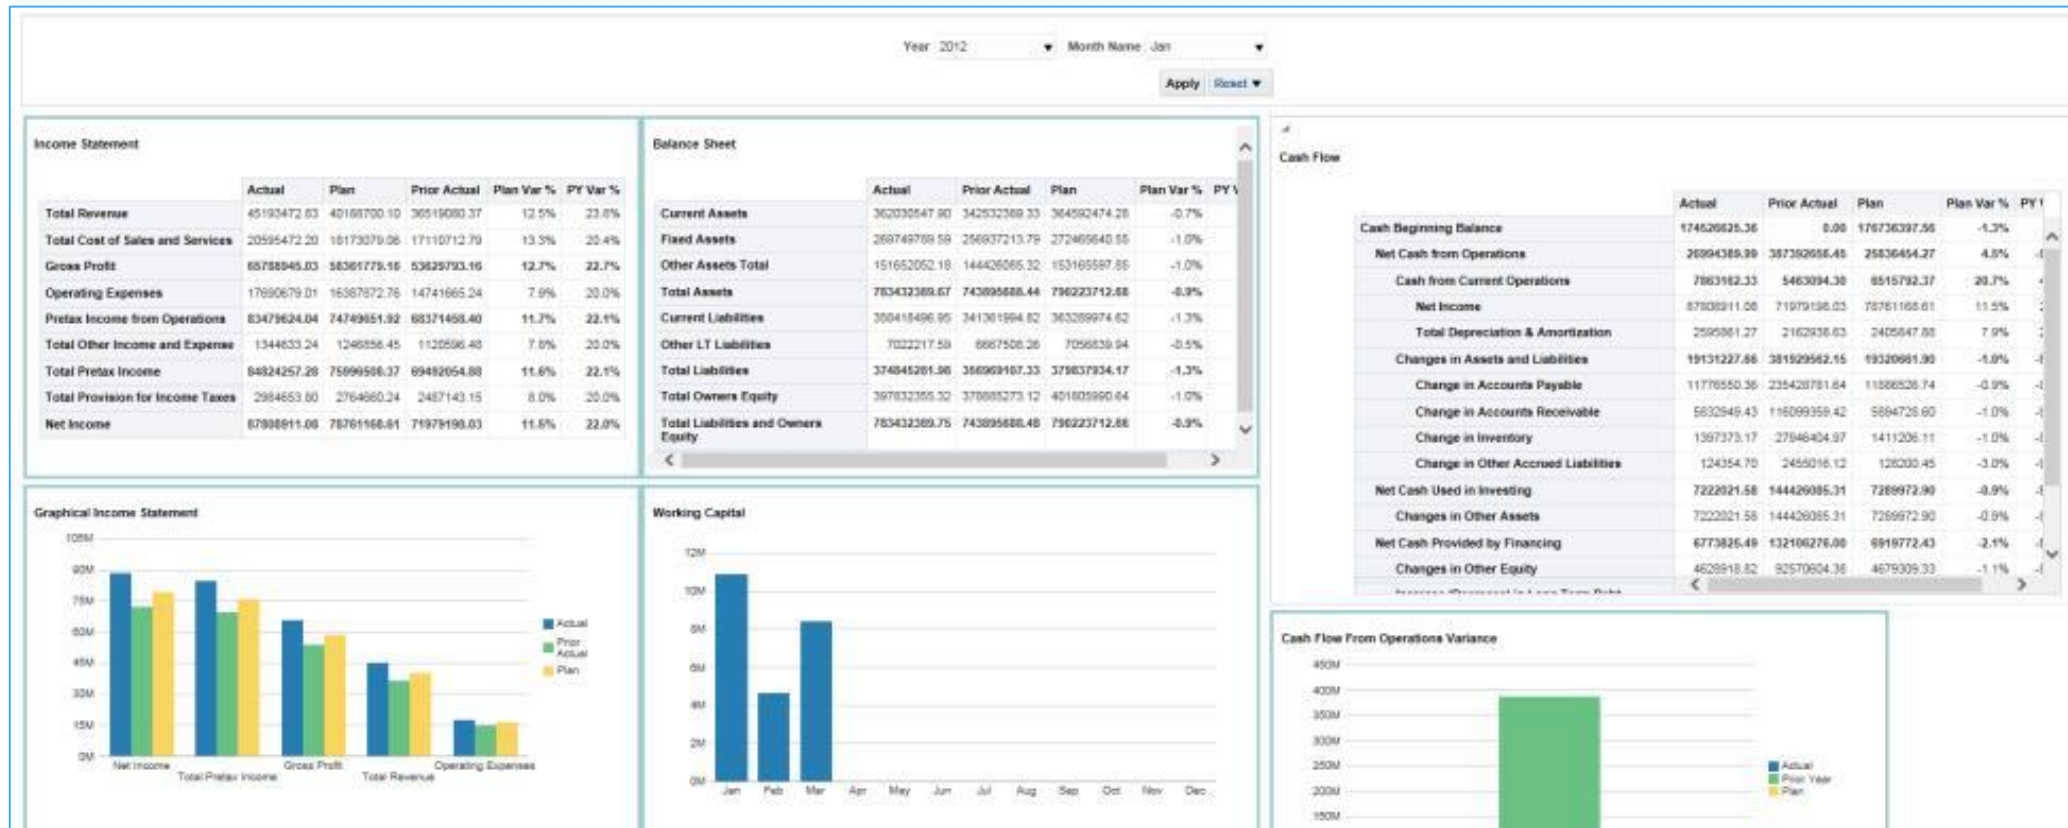

Restraint

Remember what is wrong with this picture?

Restraint

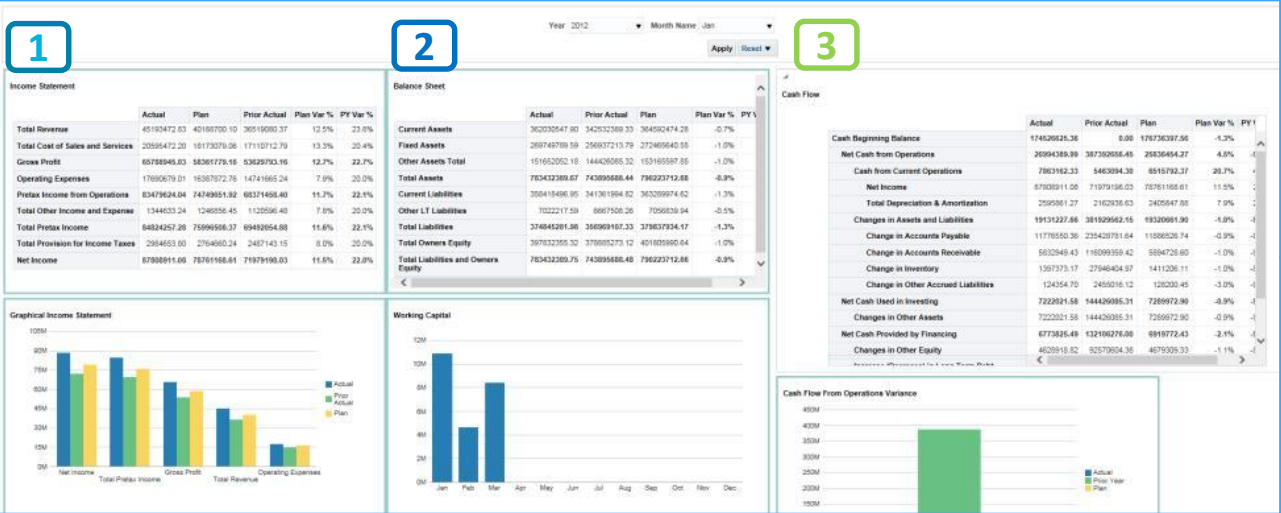

Although better than the first example, this dashboard has too many different elements:

Grant Thornton

Restraint

Dashboard combining three elements: 1) Income statement. 2) Balance sheet. 3) Cash flow.

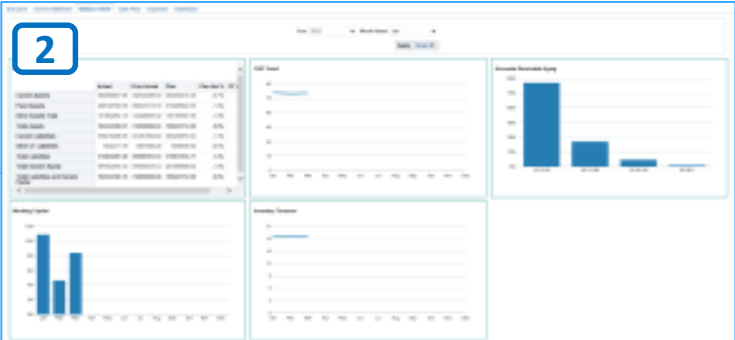

- Reporting becomes much more consumable when split into effective elements/categories.
- Remember to not only start small, but end small as well.

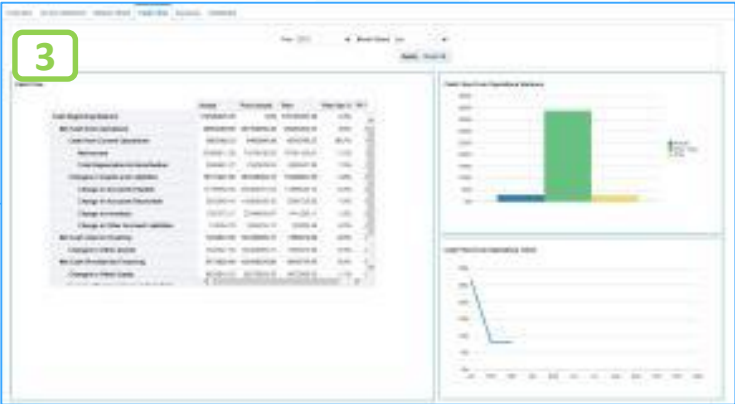

1) Income statement dashboard

2) Balance sheet dashboard

3) Cash flow dashboard

END
2021
